Azmo Rinsler

Application Developer II

☏ 207-830-1029 | az.rinsler@gmail.com | Auburn, Maine

Summary

Quality-first software developer with a wide range of experience including several languages, object-oriented programming, serverless architecture, AWS, DevOps, IaC, and testing. 6+ years of experience working in an Agile context on multiple teams and projects. Graduated with honors whilst simultaneously working multiple internships.

Work Experience

Application Developer II | February 2023 - Present

IDEXX Laboratories | Westbrook, Maine

Java, Kotlin, AWS, GitHub Actions, CloudFormation, Terraform, Maven

- Contributed to the design, implementation, and testing of a sophisticated, serverless, microservice-based integration platform in AWS consisting of 100+ Maven modules spread over 20+ repositories.
- Refactored and updated the pom files for all above modules, resolving over 1000 Dependabot vulnerability alerts in addition to replacing hard-coded properties with dynamic calls to the AWS CLI, updating and standardizing versioning, creating new parent poms, and more.
- Set up secure, parameterized build automation in GitHub Actions for multiple projects and teams, using both CloudFormation and Terraform.
- Implemented Terraform to build and deploy serverless, environment-specific OpenTelemetry collectors in AWS using ECS Fargate load balancers and Route53.

Software Engineer in Test | April 2019 - February 2023

IDEXX Laboratories | Westbrook, Maine

Java, Kotlin, SQL, Serenity, Cucumber, Jenkins, Gradle, Maven

- Designed and implemented a fully automated testing framework in Java and Kotlin using object-oriented design patterns to encapsulate UFT-based automation of a desktop Java Swing client being lifted & shifted to AWS.
- Set up parallel EC2 test runners and intelligent waits, allowing automation to run end-to-end tests 50x faster than with manual testing.
- Wrote SQL queries and supporting logic to dynamically generate randomized order data for tests - a complicated endeavor that required setting up and fully resulting medical panels with highly specific result ranges and requirements that vary by species and region.

Summer Internship | May 2018 - August 2018

Tyler Technologies | Yarmouth, Maine

MSSQL, C#, JS, JQuery

- Worked with DevOps on creating a subscription-based ticketing system for sending out alerts based on user preferences and severity.

Multiple Internships | September 2017 - May 2018

IDEXX Laboratories | Westbrook, Maine

R, SQL, Markdown, RODBCext, ERP Maestro, Microsoft Power BI

- Wrote a small R app used to generate HTML dashboard reports using information queried from a SQL Database.
- Used Power BI to analyze SAP TCode usage for improper access.

Summer Internship | May 2017 - September 2017

WEX, Inc. | Portland, Maine

Java, JavaFX

- Wrote a small Java app used by HR for the purpose of automating several forms, saving 50-60 hours per week of manual effort.

Education

B.S., Computer Science | September 2014 - December 2018

University of Southern Maine | Portland, Maine
